PROFESSIONAL SUMMARY

Flutter developer with 4+ years of experience building production mobile front-ends across e-commerce, delivery, point-of-sale, inventory, and field-service domains. Shipped 6 production apps totalling 105,000+ lines of Dart, 168 screens and 168 REST endpoints consumed. Specialised in GetX architecture, offline-first data synchronisation, and real-time interfaces including SignalR and live map tracking. Backed by working REST and PHP/MySQL knowledge that makes API integration and backend collaboration fast. Experienced leading a team of 4-6 developers.

PROFESSIONAL EXPERIENCE

Mobile Developer | ELKOOD *(February 2026 - June 2026)*

- Built and shipped two production Flutter applications - a client marketplace and a service-provider platform - totalling 54,000+ lines of Dart across 56 screens and 53 REST endpoints.
- Implemented real-time discount-request updates over SignalR, removing the need for manual screen refresh in the client app.
- Delivered 226 commits in 6 weeks on the service-provider app, including 20 documented refactors that simplified controller logic.
- Reduced redundant search traffic by adding a 400 ms debounce and paginated loading across 6 list controllers.
- Integrated OpenStreetMap for store discovery and booking locations, pre-caching store logos to eliminate marker flicker on map load.
- Diagnosed and fixed a memory leak in the map widget by adding correct observer disposal in the widget lifecycle.

Freelance Flutter Developer | Self-employed *(June 2022 - Present)*

- Delivered 10+ mobile and web projects for retail, pharmacy, and delivery clients using Flutter, PHP, and MySQL, owning the full lifecycle from requirements to release.
- Built an e-commerce and delivery app (41 screens, 49 endpoints) with live order tracking via the Google Directions API and manual polyline decoding.
- Engineered an offline-first POS system with an 8-table SQLite store and a local order queue that syncs to the server on reconnect, enabling sales during internet outages.
- Integrated Bluetooth thermal receipt printing (ESC/POS) and Arabic-font PDF invoice export into the POS and warehouse products.
- Built a warehouse management app tracking stock across one warehouse and two point-of-sale locations, with a 10-table local database and live schema migration.
- Hardened the shared network layer with 3-attempt retry, pre-request connectivity checks, and image compression before upload, cutting failed requests on unstable connections.

Software Developer | Portal Logic *(June 2024 - November 2024)*

- Reduced front-end load time by 30% through code restructuring and lazy loading.
- Developed reusable custom Flutter widgets that standardised the interface across the product.

Team Leader | Alpha GBC *(January 2023 - April 2024)*

- Led a team of 4-6 developers, ran daily stand-ups, and coordinated feature delivery against committed deadlines.
- Raised code quality by introducing structured code reviews and enforcing shared coding standards across the team.

SELECTED PROJECTS

Absher Client — Flutter, GetX, SignalR, OpenStreetMap, Firebase, SQLite

- Store-discovery and discount-card platform: 27 screens, 31 REST endpoints, and a SignalR hub for live discount-request status; 28,000+ lines of Dart.

Sahlha Store — Flutter, GetX, Firebase, Google Maps, PHP/MySQL

- E-commerce and delivery app with pharmacy prescription orders, multi-address delivery, and live driver tracking on Google Maps across 41 screens and 49 endpoints.

Maher Store POS & Warehouse — *Flutter, GetX, SQLite, ESC/POS, PDF*

- Offline-first retail suite: POS with Bluetooth thermal printing plus a warehouse app tracking stock across three locations, sharing a 32-endpoint PHP backend.

TECHNICAL SKILLS

Mobile & Front-end: Flutter, Dart, GetX (state management, routing, dependency injection), responsive UI (ScreenUtil), Arabic/English localisation with full RTL support, custom reusable widgets, skeleton loading states

Data & Offline: SQLite (sqflite), schema migrations, offline-first synchronisation, local request queues, secure local storage

Supporting Backend: RESTful API integration, PHP, MySQL - used to build and consume the backends behind my own front-end work

Real-time & Firebase: SignalR, Firebase Auth, Cloud Firestore, Cloud Messaging (FCM), deep links, push and local notifications

Integrations: Google Maps & Directions API, OpenStreetMap, geolocation and geocoding, QR/barcode scanning, Bluetooth thermal printing (ESC/POS), PDF and Excel export, image compression

Tools & Practices: Git, GitHub, GitLab, code review, layered architecture, functional error handling (Either)

Familiar with: Bloc/Cubit, Dio, Clean Architecture principles

EDUCATION

Bachelor of Engineering in Communications | University of Aleppo (*September 2018 - July 2023*)

GPA: 70%. Thesis: laser-based optical link modelling and simulation in MATLAB, analysing signal quality factors.

ADDITIONAL

Languages: Arabic (native), English (professional working proficiency)

Soft Skills: Team leadership, problem solving, clear written and verbal communication, time management, adaptability, continuous learning
